

PROJECT WORK FLOW

NAME : AKILA S

SEAT NUMBER : 96

PROJECT ID : 16

PROBLEM STATEMENT :

The modern world does not want everything to be written down and managed by hand, which makes the hostel management system method quite necessary. It is advantageous to create a management system that allows us to create a gateway for employees, administrators, and students. This includes an admin dashboard where users can manage their room assignments, keep an eye on available rooms, and read all of their alerts. The site for students and staff, where one may see available rooms. Only with the admin's permission may outsiders be allowed.

WORK FLOW:
